DETAILED ACTION

Claim Objections

1. Claim 19 is objected to because of the spelling error in the phase "for converts". Appropriate correction is required.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 18 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 18 contains the trademark/trade name TEFLON®, TEFLON PFA® and DYKOR®. Where a trademark or trade name is used in a claim as a limitation to identify or describe a particular material or product, the claim does not comply with the requirements of 35 U.S.C. 112, second paragraph. See Ex parte Simpson, 218 USPQ 1020 (Bd. App. 1982). The claim scope is uncertain since the trademark

Art Unit: 1753

or trade name cannot be used properly to identify any particular material or product. A trademark or trade name is used to identify a source of goods, and not the goods themselves. Thus, a trademark or trade name does not identify or describe the goods associated with the trademark or trade name. In the present case, the trademark/trade name is used to identify/describe the fluoropolymeric shell and, accordingly, the identification/description is indefinite.

Claim Rejections - 35 USC \$ 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 8-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over ROGERS et al. (6,139,694) in view of either ALIX et al. (6,117,403) or RUAN et al. (6,565,716). ROGERS is applied as in the first Office action. The difference between ROGERS and the above claims is that the dielectrically-coated electrodes

Art Unit: 1753

are electrode plate completely enclosed within the fluoropolymeric shell. ALIX shows in an electrical discharge reactor the provision of the above limitation (Fig. 4). RUAN shows the same in an electrical discharge reactor (col. 4, lines 15-21 and Figs. 8-10). The subject matter as a whole would have been obvious to one having ordinary skill in the art at the time the invention was made to have replaced ROGERS' dielectric-coated electrodes with each of the secondary references' dielectric-embedded electrodes because the substitution of art recognized equivalents as shown by each of the secondary references would have been within the level of ordinary skill in the art.

As to the subject matter of each new claims 18 and 19, ROGERS discloses the limitations in col. 4, lines 30-36 and in Fig. 7.

Double Patenting

6. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double

Art Unit: 1753

patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

7. Claims 8 and 11-19 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 2, 3, and 5-7 of U.S. Patent No. 6,309610. Although the conflicting claims are not identical, they are not patentably distinct from each other because the patent claims recites all the structures as claimed except for the intended use of the apparatus. The subject matter as a whole would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified the reference's teachings because it has been held on the intended use of a device that "apparatus claims cover what a device is, not what a device does", Hewlett-Packard Co. v. Bausch & Lomb Inc., 15 USPQ 2d 1525.

As to the provision of an inlet and outlet to the reactor as claimed in claim 11, such a provision would have been within the level of ordinary skill in the art because "the use of conventional materials to perform their known functions in a conventional process is obvious". In re Raner 134 USPQ 343.

Art Unit: 1753

As to the subject matter of claim 17, the patent claim 7 recites a plurality of spacers, hence contemplate that more than two electrodes.

As to the subject matter of claim 18, the selection of any of known equivalent fluoropolymer shell materials would have been within the level of ordinary skill in the art.

Response to Arguments

8. Applicant's arguments filed 9 June 2004 have been fully considered but they are not persuasive because of the new ground of rejection as set forth in the paragraphs above.

Conclusion

9. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, THIS ACTION IS MADE FINAL. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is

Art Unit: 1753

filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kishor Mayekar whose telephone number is (571) 272-1339. The examiner can normally be reached on Monday-Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nam Nguyen can be reached on (571) 272-1342. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR.

Art Unit: 1753
